

GENERAL CUSTOMER INFORMATION

Permanent hair removal with IPL: Men's back

Treatment with **skinPULSE IPL devices from Cosmedico Medical Systems** is a recognized and a low complication rate method, which involves only a few residual risks. To minimize these risks completely or as low as possible, please read this leaflet carefully before treatment. Should you have any further questions please consult our therapists.

Treatment with IPL/RF shows quickly visible and good results in permanent hair removal. The number of treatments depends on the type and intensity of the hair in the desired area.

Background information:

Nature and intensity of hair depends on our genetics and race type. On an average, men have up to 500 hair follicles per square centimetre on their back. A few months pass until this huge amount of hair has achieved each growth phase and becomes treatable. For complete hair removal of the back allow a period of 1 to 2 ½ years.

Please note that the hair of a men's back is only fully developed with the **achievement by the 6th Decade of life**. This means that in the course of your life, hair growth may reappear at different ages. These hairs **do not arise from the follicles that have already been treated with IPL**, but are new follicles that have been put in an "active" state by the body and that **previously have never produced** a hair.

To determine whether your skin type and skin condition can be treated will be clarified with you in a personal consultation, followed by a test patch treatment.

It is our aim to accompany you through the IPL treatment and to give you individual support and advice, answering any questions you may have about the treatment.
